

IFAT 2008 Review

May 13, 2008. The participation of tegos in the IFAT – the International Trade Fair for Water, refuse, and recycling – 2008 at Munich was a great success. tegos could present itself as a leading supplier of business software for recycling and waste management companies. The IFAT is the world's most important fair for environmental technology and related services.

The stand of tegos was a common exhibition of tegos Dortmund and its distribution partners tegos Rosenheim, mse (Ravensburg), Omega Solutions (Austria) and Qurius (BeNeLux). On a surface of 100 sqm the partners presented the integrated software solution **enwis**) with its different modules, add-ons, and innovations.

Most impressive was the international composition of the audience. Customers and prospects from all over the world (from all countries of Europe, the United States, Brasilia, South Afrika, India, Uruguay, and different Asian countries i.a.) convinced itself of the numerous advantages offered by the integrated software solutions made by tegos.

Contact to a great number of prospective customers could be established. The most important issue for the German customers and prospects was a solution for the digital monitoring of hazardous waste transports imposed by German law from 2010. This legislation change implies the construction of a nationwide and standardized communication structure, providing each transport of hazardous waste with electronic documents conforming to defined XML-schemes.

A very positive response got the second generation of tegos' telematics solution **enwis**)tel too. The functional enhancements as well as the new hardware components produced a lot of interest among the visitors. Even successfully was the newly developed graphical dispatching center which enables as add-on of **enwis**) a dispatching via Drag and Drop.

In consequence of the great success of our presence at the IFAT 2008 we are still preparing our participation in 2011.
